

fresh cow **YMCP** Capsules

Complete fresh cow capsule featuring yeast, magnesium, calcium, potassium, and niacin to ease the transition into lactation

To ease the transition into lactation after freshening, cows need a way to recover from the loss of essential nutrients. Make recovery easier by giving Fresh Cow YMCP Capsules to boost levels of yeast, magnesium, calcium, potassium, and niacin. As one of the top transition products on the market, Fresh Cow YMCP Capsules help to reduce immediate post-calving complications such as reduced appetite, milk fever, hypocalcaemia, and retained placentas. More than just a tool to combat metabolic disorders, Fresh Cow YMCP Capsules also help to provide nutrients needed to reach optimum peak milk therefore improving profitability through better ME305 milk and components.

KEY FUNCTIONAL COMPONENTS: Yeast, Magnesium, Calcium, Potassium, Electrolytes, Niacin, Betaine

FEATURES & BENEFITS

- Contains four types of calcium (calcium lactate, tricalcium phosphate, calcium propionate, calcium carbonate) to help aid in recovery and get used to the demands of lactation
- Includes yeast, magnesium, potassium, and niacin and other key ingredients to help improve peak milk production

QUICK REFERENCE

- Transition product provides key nutrients needed to help ease the transition from freshening into lactation
- Provides nutrients essential to help reach optimum peak milk while also helping to combat metabolic disorders
- Convenient capsule form

WHEN TO USE

- To help prevent and reduce metabolic disorders including milk fever, hypocalcaemia, ketosis, displaced abomasums, and retained placentas
- For cows that are energy deficient
- Have been off feed
- Post surgery
- As a follow up intravenous calcium administration to maintain calcium levels in the blood

DIRECTIONS FOR USE

Administer 6 capsules to each cow post-calving. Hold animal's head upright and open mouth. Using capsule forceps, balling gun, or other effective means, place the bolus capsules down the animal's throat.
